Boston, MA | (781) 315-5316 | squires.r@northeastern.edu | [in/bobby-squires](https://github.com/bobbysquires) | bobbysquires.github.io

EDUCATION

Northeastern University

Boston, MA

Master of Science in Applied Mathematics

Sep. 2025 – Apr. 2027 (Expected)

GPA: 4.000/4.000

Graduate Coursework: Applied Econometrics 1 & 2 (PhD-level), Analysis 1, Optimization & Complexity.

Bachelor of Science in Mathematics & Economics, summa cum laude

Sep. 2022 – Apr. 2026

GPA: 3.869/4.000 **Major GPA:** 3.877/4.000

Coursework: Adv. Linear Algebra, Adv. Probability & Statistics, Differential Equations, Group Theory, Game Theory, Microeconomic Theory, Macroeconomic Theory, Real Analysis, Stochastic Processes, Topology.

WORK EXPERIENCE

Research Assistant for Prof. Matthew Ross

Sep. 2024 – Present

Northeastern University

Boston, MA

- Investigated changes in post-pandemic crime and the role of political media. Cleaned data and generated figures using Stata. Met weekly with Prof. Ross and collaborators to discuss preliminary results.
- Organized disparate datasets (911 and 311 calls, political newsletters, TV news transcripts, podcast transcripts, and social media posts) into an analytic repository with replication scripts.

Student Researcher

May 2026 – Jun. 2026

Northeastern Math Department REU

Boston, MA

- Collaborated with other undergraduates and Ph.D. student mentors to study graph burning, a discrete-time process modeling how fast contagion can spread through a network.
- Derived and proved exact formulas for the burning numbers of the Kneser graph family.

Fixed Income Risk Co-op

Dec. 2024 – Jul. 2025

Wellington Management

Boston, MA

- Automated creation of common risk and performance plots with an internal Python library for analysts.
- Built a Python module for flexibly aggregating 22M+ rows of risk model data. Sped up data processing with lazy evaluation, expanding historical scenario analysis capabilities.
- Presented a weekly market update to FI Risk. Report was used for investment leadership meetings.

RELEVANT PROJECTS

NEU Fed & Fiscal Challenge Team Captain

- Synthesized public policy research into a comprehensive policy agenda designed to stabilize U.S. debt-to-GDP ratio over 30 years, complete with a yearly budget model.
- Analyzed inflation and employment indicators, market signals, and recent macroeconomic research. Presented policy decisions to economists in a mock FOMC meeting.
- Placed third in Fiscal Challenge (2023, 2024). Placed third in Boston Fed Challenge (2025).

Senior Economics Thesis

- Studied the impact of 2020 BLM protests on proactive policing. Wrote Python code to construct a daily panel of police dispatch data and protests in 40 U.S. cities during 2020.
- Analyzed panel with Stata. Exploited city-level variation in protest timing and officer injury for identification. Exposure to salient backlash via peer injuries reduced officer-initiated encounters.

SOFTWARE SKILLS

Python, Stata, R, Git, LaTeX, MySQL, Amazon S3, Excel, PowerPoint.
